

## ABSTRACT OF THE DISCLOSURE

A releasable tie is described in which an elongated strand of flexible material is provided with a first set of three dimensional beads spaced apart along a first length of the strand. A second set of three dimensional beads, formed on the strand are spaced apart along a second length of the strand. A tab formed along the strand includes a first locking slot for releasably receiving the first strand length; and a second locking slot for releasably receiving the second length of the strand.
